# NMC Air+

NMC Air+ enables remote access to Netafim irrigation and fertigation controllers (NMC PRO and NMC Junior) from any computer, tablet or smartphone.

Once the connection to the system is set, the NMC Air+ Comm-box allows the fertirrigation management through the app.

## Specifications

Netafim NMC Air+ , an advanced app used to connect to NMC Pro or NMC Junior controllers, enables full management over the irrigation and fertigation operations.

The remote management of the irrigation and fertigation controllers has never been made so easy and intuitive, with dashboard, hot keys and visuals.

NMC Air+ includes different access level by accounts: view only, partial access, full access or administrator.

NMC Air+ can work even without internet access by simply plugging a display or monitor directly into a NMC Comm-box, which is connected to the controller.

In the unfortunate case of errors, NMC Air+ features a rich diagnostic package that makes troubleshooting an easy task.

\* To obtain the NMC Air+ app on Google Play and Apple Store please refer to your Netafim rep.
